

V2.0.2 Release Note – 3 December 2019

■ Feature Enhancements and Bug Fixes

No.	Summary	Type	Description
1.	Import Study SDTM/ADaM Specs from Define-XML	Feature Enhancement	Import Define-XML feature at Create New SDTM/ADaM Spec and at Create New Version has been added.
2.	Import SDTM/ADaM Codelists from Excel	Feature Enhancement	Import Codelists feature is now available on the Codelist screen of SDTM/ADaM specs. This feature allows a user to import codelists from Excel in the SDTM/ADaM spec format without affecting other parts of the spec than the Codelist screen.
3.	ODM-XML Export	Feature Enhancement	A feature for exporting CRF specs in the ODM-XML format has now been added.
4.	Import SDTM/ADaM Specs with VLM from Excel failed	Bug Fix	tsClinical Metadata V2.0.0 and later exports VLM in SDTM/ADaM specs with repeated Value part (i.e. VLM excluding WhereClause part) when the VLM has more than one WhereClauses. tsClinical Metadata V1 exported such VLM with blank Value part. A bug of failing import of the V1 format has now been fixed.
5.	Duplicate VLM on Define-XML	Bug Fix	tsClinical Define-XML Generator has been updated from V1.4.1 to V1.4.2 to fix a bug that generates duplicated Value Level Metadata (VLM) on Define-XML when the VLM has more than one WhereClauses.

■ Known Issues, Limitations

No.	Summary	Description
1.	N/A	N/A
