

V2.5.4 Release Note – 6 Nov 2022

■ Feature Enhancements and Bug Fixes

No.	Summary	Type	Description
1.	Incorrect algorithm of sorting extra variables when the Variable tab is updated.	Bug Fix	When updating the Variable tab of a SDTM spec, the system also updates order of variables in the Variable Mapping tab. During the update, the algorithm of identifying a parent variable of an extra variable could be incorrect when multiple Mapping Groups exists per dataset, and thus could end up with incorrect sorting of extra variable. This issue has been fixed.
