

## V2.6.2 Release Note – 22 Jan 2023

## ■ Feature Enhancements and Bug Fixes

No.	Summary	Type	Description
1.	Incorrect Source Table Label on Dataset Mapping	Bug Fix	The Source Table label on the Dataset Mapping page could be incorrect when there were multiple source tables of the same table ID (of different source IDs). The issue has been fixed.
2.	Same Left/Right Source Tables in JOIN_KEY	Bug Fix	Selecting the same left/right source tables was restricted in the JOIN_KEY page. The restriction has been removed.
3.	Duplicate concept mappings in SDTM Spec (Excel Executable)	Bug Fix	Duplicate concept mapping records were produced in the Excel Executable format of a SDTM spec when more than ten mapping groups existed for a single source table. The issue has been fixed.
4.	Default Insert Position in Add Extra Variable	Bug Fix	The default selection of the Insert Position in the Add Extra Variable dialog of the SDTM Spec Variable Mapping page has been changed from Below to Above because it is used more frequently.
