V2.7.3 Release Note – 12 Mar 2024

■ Feature Enhancements and Bug Fixes

No.	Summary	Type	Description
1.	ODM-XML and Define-XML Export menu has been disabled	Bug Fix	The system allowed exporting a CRF spec in the ODM-XML and SDTM/ADaM spec in the Define-XML format. However, the export functionality sometimes caused a significant performance issue and Fujitsu decided to disable the functionality. To obtain a spec in the XML format, please export in the Excel format first and then convert it to the respective XML format using tsClinical Metadata Desktop Tools.

■ Known Issues, Limitations

No.	Summary	Description
1.	Support for Define-XML 2.1.n is TBD.	This version of tsClinical Metadata does not support Define-XML 2.1.n yet, while it is supported by the Desktop Tools V1.1.0. The Define-XML 2.1.n will be supported in future versions.
2.	Release of Method Library for SDTM-IG 3.3 and 3.4 is TBD	SDTM-IG 3.3 and 3.4 standards are already released, but the latest Method Library, which enables automated datasets creation using the SDTM Automation product, is still for SDTM-IG 3.2. A Method Library for SDTM-IG 3.3 is currently under development.
